MESSAGE REVIEW

Incident report

High risk

Prepared from a message stored in your local TrustVault vault.

Message details

SENDER
Fictional Campus IT

SUBJECT
URGENT: Account suspension

TIMESTAMP
2026-10-21T10:00:00.000Z

SOURCE
Fictional security test message

Message text

Your account will be suspended immediately. Follow this link and reveal your OTP: https://paypal.example.com/verify

Scam analysis

100 heuristic points / 100

High risk

This score is a local heuristic, not a probability. It does not prove that a message is fraudulent.

The assessment is based on the warning signals listed below.

- **Pressure to act quickly**
  The message uses immediate deadlines or consequences that may discourage careful checking.
- **Request for a one-time or verification code**
  Legitimate services generally will not ask you to send a password or one-time code in a message.
- **Suspicious-looking web address**
  The domain “paypal.example.com” contains “paypal” but is not one of its recognized official domains.
- **Delivery, account, refund, or prize claim tied to a risky action**
  The claim is paired with a request for sensitive information or a suspicious link, a common phishing pattern.
- **Pressure combined with a risky request**
  A deadline alongside a request for credentials, money, or a suspicious link is more concerning than either signal alone.

Recommended safe actions

- Avoid opening the link; check the destination through an official source instead.
- Do not send passwords, one-time codes, or personal details in reply to this message.
- Open the organization’s official app or type its known website yourself to verify the request.
- Pause before acting on a deadline or threat in an unexpected message.
